Situational Awareness (8:00 am—10:00am)

Active Threat Awareness: Are you prepared and know what to do in an active threat situation at work, at home, or in the community? Is your agency prepared? We will have a discussion about what different agencies are doing and what else you can do.

Situational Awareness: A discussion on the importance of knowing what is happening around you. Responsive versus reactive. What you can do to increase your situational awareness.

Kerry Swain worked in the field of Corrections for 25 years, most recently, 18 years with the Department of Corrections (DOC). She served as an Associate Superintendent (Deputy Warden) for over 10 years in three different male prisons. She also held the position of Security and Logistics Administrator where Kerry oversaw the statewide Emergency Management, statewide Transportation, and Offender Classification for DOC. She is a proud graduate of Eastern Washington University.

Two years ago, the Department of Revenue stole Kerry from DOC to fill the Agency Security Manager position. This position was created to oversee the security measures put in place with the passage and implementation of I-502.

Kerry has spent the past year teaching Active Threat Awareness at all of the Revenue offices, and due to her correctional experiences, she has extensive personal experience in Situational Awareness.

Cybersecurity (10:00 am—2:00pm)

What actually happens when you "delete" data from your computer?

Interested in the information that computing devices may be keeping about you that would be available to someone with the right skills and tools? Both of these topics and more will be covered by computer forensic experts Steve Hailey and Mike Andrew, as they take you through multiple cases and investigations they have worked on.

As of 2016, Steve Hailey will be an Information Technology veteran of thirty-three years, with twenty-six years of experience developing and delivering technical training. Steve has thirty years of data recovery experience, and has been providing information security and digital forensics services professionally for nineteen years. He is a highly skilled expert witness and dynamic instructor, bringing to bear his combined skills in information security and digital forensics. He is the founder and former President of the Washington State High Technology Crime Investigation Association, and was formerly Vice President of the Digital Forensics Certification Board.
